Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A separable apparatus to cushion and dampen vibration, comprising:

an overmold member composed of a mixture of an elastomeric material and a foaming agent, comprising:

a first non-foam layer; and

a second non-foam layer, in conjunction with the first layer, enveloping a micro-cellular foam layer as a unitary, separable overmold member.

- 2. (Original) The separable apparatus of claim 1, wherein the elastomeric material is selected from a group comprising thermoplastic olefins, thermoplastic rubbers, thermoplastic polyurethanes, polyvinylchlorides, styrenic block copolymers, and combinations of such materials.
- 3. (Currently Amended) The separable apparatus of claim 1, wherein the two non-foam first and second layers and the foam layer are integrally molded with each other by injection molding of resin.
- 4. (Original) The separable apparatus of claim 1, further comprising a substrate member coupled to the overmold member.
- 5. (Original) The separable apparatus of claim 4, wherein the overmold member is mechanically attached to the substrate member.
- 6. (Currently Amended) The separable apparatus of claim 4, wherein at least one of the non-foam first and second layers is bonded to the substrate member.
- 7. (Original) The separable apparatus of claim 4, wherein the substrate member is selected from a group of materials including: wood, metal, thermoplastic resin, thermoset resin, epoxy, ceramic, glass, and a combination of any two such materials.

- 8. (Currently Amended) The separable apparatus of claim 1, wherein the thickness of the foam layer exceeds the combined thickness of the <u>first and second layers</u> non-foam layer.
- 9. (Currently Amended) The separable apparatus of claim 1, wherein the combined thickness of the <u>first and second non-foam</u> layers exceeds the thickness of the foam layer.
- 10. (Currently Amended) The separable apparatus of claim 1, wherein the combined thickness of the <u>first and second non-foam</u> layers is equal to the thickness of the foam layer.
- 11. (Original) The separable apparatus of claim 1, wherein the overmold is configured in a predetermined shape.
 - 12.-63. (Canceled).
